ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of enestetic, analgesic, and tranquilizing drugs, prior to, during, and following actual rest teaching, teating, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and applicable. Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary inc brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ansure the provision of edequate veterinary care and to overses the adequacy of other aspects of animal care and use.

USDA ANNUAL REPORT (2002-2003)

Registration #: 22-R- 0006

The following animals were reported on previous USDA Reports under License: 22-R-0006.

SPECIES	CATEGORY B	CATEGORY C	CATEGORY D	CATEGORY E
DOGS	0	170	154	18
GUINEA PIGS	0	8	141	0
HAMSTERS	0	0	122	0
RABBITS	5	0	53	0
NON-HUMAN PRIMATES	12	11	52	0

USDA ANNUAL REPORT (2002-2003)

Registration #: 22-R- 0006

Animals Listed in Category E

During the reporting period, Johnson & Johnson Pharmaceutical Research & Development, L.L.C. Institutional Animal Care and Use Committee (IACUC) approved the use of animals in Category E as follows:

SPECIES	NUMBER	PROCEDURE/JUSTIFICATION
Dogs	34	Single and repeat dose Pharmacokinetic/Toxicology studies as part of the Preclinical package submitted to the FDA for review and eventual drug approval. In these studies, animals may occasionally show mild emesis and short-term loss of appetite. It is important to determine if these clinical signs are reversible, as is often the case. Opioid analgesics alter GI motility and would be contraindicated. 1,2, 3
Guinea Pigs	30	Animals involved in studies on delayed hypersensitivity and anaphylaxis. These animals (controls) are used to evaluate potential asthma treatments and are thus exposed via aerosol to agents that cause mild, transient bronchospasm. 1
Hamster	446	Studies are used for evaluating anti-inflammatory compounds. Dorsal sub-cutaneous air pouch and paw edema models are utilized. I

¹ Administration of anesthetics, analgesics or tranquilizing drugs must be withheld so as not to invalidate the evaluation of test compounds.

² Preclinical toxicology and drug metabolism/pharmacokinetic studies are required in nonhuman species by the Food and Drug Administration, Good Laboratory Practice Regulations – CFR 21, Part 58 (Code of Conduct).

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anestetic, analgesic, and tranquilizing drugs, prior to, during, and following actual res aching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and ap Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary incoming the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

CERTIFICATION BY HEADQUARTERS RESEARCH FACILITY OFFICIAL

DATE SIGNED

11.26-13

ORAL (GAVAGE) RISING DOSE/2-WEEK TOXICITY STUDY IN DOGS

۱.	Registration Number: 22-R-0009
2.	Number of animals used in this study – 4. Number of animals classified as category "E" - 2.
3.	Species (common name) of animals used in this study.
1.	Explain the procedure producing pain and/or distress.
	These dogs were dosed with a pharmaceutical compound.
	Two dogs on this study experienced compound related effects and were euthanized unscheduled.
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)
	As soon as there were signs indicating that an animal was experiencing pain or distress, it was euthanized.
ô.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federa Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)

INTRAVENOUS RISING DOSE TOXICITY STUDY IN DOGS WITH A 17-DAY **RECOVERY PERIOD**

1. Registration Number: 22-R-0009

2.	Number of animals used in this study – 6. Number of animals classified as category "E" - 1.
3.	Species (common name)of animals used in this study.
4.	Explain the procedure producing pain and/or distress.
	These dogs were dosed with a pharmaceutical compound.
	One dog on this study experienced compound related effects.
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)
	The clinical signs were not deemed so severe that intervention was necessary. This animal remained on study.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:

1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)

or

52-WEEK ORAL (CAPSULE) TOXICITY STUDY IN DOGS WITH A 4-WEEK RECOVERY PERIOD

1.	Registration Number: 22-R-0009
2.	Number of animals used in this study – 40. Number of animals classified as category "E" - 22.
3.	Species (common name)of animals used in this study.
4.	Explain the procedure producing pain and/or distress.
	These dogs were dosed with a pharmaceutical compound.
	Twenty two dogs experienced compound related effects such as diarrhea and emesis.
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)
	The signs were not considered to be so severe that intervention was necessary.
6.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)

26-WEEK ORAL (CAPSULE) TOXICITY STUDY IN DOGS WITH A 4-WEEK RECOVERY PERIOD

1.	Registration Number: 22-R-0009
2.	Number of animals used in this study – 38. Number of animals classified as category "E" – 10.
3.	Species (common name) of animals used in this study.
4.	Explain the procedure producing pain and/or distress.
	These dogs were dosed with a pharmaceutical compound.
	Ten dogs experienced compound related effects such as diarrhea primarily.
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)
	The signs were not considered to be so severe that intervention was necessary.
6.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)

26-WEEK ORAL (CAPSULE) TOXICITY STUDY IN DOGS WITH A 4-WEEK RECOVERY PERIOD

1.	Registration Number: 22-R-0009
2.	Number of animals used in this study – 40. Number of animals classified as category "E" - 13.
3.	Species (common name)of animals used in this study.
4.	Explain the procedure producing pain and/or distress.
	These dogs were dosed with a pharmaceutical compound.
	Thirteen dogs experienced compound related effects in this study. One was euthanized unscheduled and the signs for the others were not considered to be so severe that intervention was necessary.
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods of means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)
	As soon as there were signs indicating that an animal was experiencing pain or distress, it was euthanized.
6.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)

ORAL (GAVAGE) RISING DOSE/1-WEEK TOXICITY STUDY IN DOGS

1.	Registration Number: 22-R-0009	
2.	Number of animals used in this study – 6. Number of animals classified as category "E" - 5.	
3.	Species (common name) of animals used in this study.	
4.	Explain the procedure producing pain and/or distress.	
	These dogs were dosed with a pharmaceutical compound.	
	Five dogs experienced compound related effects in this study and were euthanized unscheduled.	
5.	. Provide scientific justification why pain and/or distress could not be relieved. State methods o means used to determine that pain and/or distress relief would interfere with test results. (Fo Federally mandated testing, see question 6 below)	
	As soon as there were signs indicating that an animal was experiencing pain or distress, it was euthanized.	
6.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):	
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:	
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)	

INTRAVENOUS RISING DOSE TOXICITY STUDY IN DOGS WITH A 16-DAY RECOVERY PERIOD

۱.	Registration Number: 22-R-0009
2.	Number of animals used in this study – 4. Number of animals classified as category "E" - 1.
3.	Species (common name) of animals used in this study.
1.	Explain the procedure producing pain and/or distress.
	These dogs were dosed with a pharmaceutical compound.
	One dog experienced compound related effects in this study. This dog was euthanized on study day one.
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods of means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)
	As soon as there were signs indicating that an animal was experiencing pain or distress, it was euthanized.
6.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)

ORAL (GAVAGE) RISING DOSE/1-WEEK TOXICITY STUDY IN DOGS

1.	Registration Number: 22-R-0009	
2.	Number of animals used in this study – 6. Number of animals classified as category "E" - 6.	
3.	Species (common name) of animals used in this study.	
4. Explain the procedure producing pain and/or distress.		
	These dogs were dosed with a pharmaceutical compound.	
Six dogs experienced compound related effects such in this study. One dog was found de study day 5 and three other dogs were euthanized unscheduled on study day 5. Two dogs euthanized unscheduled on study days 7 and 9.		
 Provide scientific justification why pain and/or distress could not be relieved. State method means used to determine that pain and/or distress relief would interfere with test results. Federally mandated testing, see question 6 below) 		
	As soon as there were signs indicating that an animal was experiencing pain or distress, it was euthanized.	
6.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federa Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):	
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:

2.	Number of animals used in this study – 8. Number of animals classified as category "E" - 1.		
3.	Species (common name) of animals used in this study.		
4.	Explain the procedure producing pain and/or distress.		
	These dogs were dosed with a pharmaceutical compound.		
	One dog on this study experienced compound related effects. It had diarrhea for more than one week.		
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)		
	The signs were not considered to be so severe that intervention was necessary.		
ŝ.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):		
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:		
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)		

4-WEEK ORAL (GAVAGE) TOXICITY STUDY IN DOGS WITH A 4-WEEK RECOVERY PERIOD

1.	Registration Number: 22-R-0009
2.	Number of animals used in this study – 32. Number of animals classified as category "E" - 10.
3.	Species (common name) of animals used in this study.
4.	Explain the procedure producing pain and/or distress.
	These dogs were dosed with a pharmaceutical compound.
	Ten dogs experienced compound related effects in this study. The effects included diarrhea, ataxia and emesis greater than 3 days duration. One dog was euthanized unscheduled.
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods o means used to determine that pain and/or distress relief would interfere with test results. (Fo Federally mandated testing, see question 6 below)
	The signs for the others were not considered to be so severe that intervention was necessary.
3 .	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals

4-WEEK ORAL (GAVAGE) TOXICITY STUDY IN DOGS WITH A 4-WEEK RECOVERY PERIOD

۱.	Registration Number: 22-R-0009
2.	Number of animals used in this study – 32. Number of animals classified as category "E" - 11.
3.	Species (common name) of animals used in this study.
4.	Explain the procedure producing pain and/or distress.
	These dogs were dosed with a pharmaceutical compound.
	Eleven dogs experienced compound related effects such as diarrhea and emesis. Four were euthanized unscheduled.
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)
	The signs for the others were not considered to be so severe that intervention was necessary.
6.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)

ORAL (GAVAGE) RISING DOSE TOXICITY STUDY IN DOGS

1.	Registration Number: 22-R-0009
2.	Number of animals used in this study – 6. Number of animals classified as category "E" - 1.
3.	Species (common name)of animals used in this study.
4.	Explain the procedure producing pain and/or distress.
	These dogs were dosed with a pharmaceutical compound.
	One dog experienced compound related effects in this study.
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)
	The animal was found dead.
6.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)

2-WEEK ORAL (GAVAGE) TOXICITY STUDY IN DOGS

1.	Registration Number: 22-R-0009		
2.	Number of animals used in this study – 24. Number of animals classified as category "E" - 3.		
3.	Species (common name) of animals used in this study.		
4.	Explain the procedure producing pain and/or distress.		
	These dogs were dosed with a pharmaceutical compound.		
	Three dogs on this study experienced compound related effects. They had emesis on more than 7 days of the study.		
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)		
	The signs were not considered to be so severe that intervention was necessary.		
6.	What, if any, federal regulations require this procedure? Cite the agency, the Code of Federa Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):		
	The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:		
	1) M3 Nonclinical safety studies for the conduct of human clinical trials for pharmaceuticals published in the Federal Register on November 25, 1997 (62 FR 62922)		

INTRAVENOUS RISING DOSE TOXICITY STUDY IN MONKEYS WITH A 16-DAY RECOVERY PERIOD

1.	Registration Number:	22-R-0009	
----	----------------------	-----------	--

- 2. Number of animals used in this study 8. Number of animals classified as category "E" 5.
- 3. Species (common name)___Non-human Primate___ of animals used in this study.
- 4. Explain the procedure producing pain and/or distress.

These primates were dosed with a pharmaceutical compound.

Five monkeys experienced skin irritations and lesions as a compound related effect.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The lesions were treated topically or were not considered so severe that interventions was necessary.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:

4-WEEK ORAL (GAVAGE) TOXICITY STUDY IN MONKEYS WITH A 4-WEEK RECOVERY PERIOD

1.	Registration Number:	22-R-0009

- 2. Number of animals used in this study 32. Number of animals classified as category "E" 1.
- 3. Species (common name) Non-human Primate of animals used in this study.
- 4. Explain the procedure producing pain and/or distress.

These primates were dosed with a pharmaceutical compound.

This monkey experienced decreased locomotor activity, dehydration and emesis as compound related effects. This monkey also experienced the compound related effect of emesis on seven of thirty days on study. Five of the seven days occurred within the same week.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The purpose of this study was to determine the toxicity of the compound. In these cases, the relief of pain and/or distress would have defeated the purpose of the study.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific quidelines may be found in the following:

4-WEEK ORAL (GAVAGE) TOXICITY STUDY IN MONKEYS WITH A 4-WEEK RECOVERY

• •	. togica attori i tambori	

- 2. Number of animals used in this study 32. Number of animals classified as category "E" 8.
- 3. Species (common name) Non-human Primate of animals used in this study.

22-R-0009

4. Explain the procedure producing pain and/or distress.

Registration Number

These primates were dosed with a pharmaceutical compound.

Eight monkeys on this study experienced compound related effects. One was found dead, two were euthanized unscheduled and for the other five the clinical signs were not considered so severe that intervention was necessary.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

As soon as there were signs that animals were experiencing significant pain and distress they were euthanized.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:

39-WEEK ORAL (GAVAGE) TOXICITY STUDY IN MONKEYS WITH A 4-WEEK RECOVERY PERIOD

1.	Registration Number:	22-R-0009
----	----------------------	-----------

- 2. Number of animals used in this study 40. Number of animals classified as category "E" 9.
- 3. Species (common name) ___Non-human Primate ___ of animals used in this study.
- 4. Explain the procedure producing pain and/or distress.

These primates were dosed with a pharmaceutical compound.

Nine monkeys experienced compound related effects on this study. One animal was found dead and seven were euthanized unscheduled. For one animal, the clinical signs were not deemed so severe that intervention was necessary. This animal is still on study.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

As soon as there were signs indicating that an animal was experiencing pain or distress, it was euthanized.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:

10-DAY ORAL (GAVAGE) DOSE ESCALATION STUDY IN MARMOSETS

- 1. Registration Number: 22-R-0009
- 2. Number of animals used in this study 12. Number of animals classified as category "E" 6.
- 3. Species (common name)___Non-human Primate___ of animals used in this study.
- 4. Explain the procedure producing pain and/or distress.

These primates were dosed with a pharmaceutical compound.

Six marmosets on this study experienced the compound related effect of emesis for more than three consecutive days.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The purpose of this study was to determine the toxicity of the compound. In these cases, the relief of the emesis would have defeated the purpose of the study. Therefore the degree of distress experienced was justifiable.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific quidelines may be found in the following:

1-WEEK ORAL (GAVAGE) TOXICITY STUDY IN MARMOSETS

1.	Registration Number:	22-R-0009
2.	Number of animals used in thi	s study – 16. Number of animals classified as category "E" - 1.
3.	Species (common name)	Non-human Primates of animals used in this study.

4. Explain the procedure producing pain and/or distress.

These primates were dosed with a pharmaceutical compound.

One marmoset experienced compound related effects in this study. This marmoset had diarrhea with some blood in it for 3-4 days.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Intervention was not deemed necessary.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:

2-WEEK ORAL (GAVAGE) DOSE RANGE-FINDING TOXICITY STUDY IN MARMOSETS

1.	Registration Number:	22-R-0009
2.	Number of animals used in thi	s study – 24. Number of animals classified as category "E" - 4.
3.	Species (common name)	Non-human Primates of animals used in this study.
4.	Explain the procedure produc	ing pain and/or distress.

These animals were dosed with a pharmaceutical compound.

Four marmosets experienced compound related effects. Three of the four had emesis more than 3 days consecutively. One had decreased locomotor activity and poor body condition and had to be euthanized unscheduled on day 15 of dosing.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The purpose of this study was to determine the toxicity of the compound. As soon as there were signs indicating that an animal was experiencing pain or distress, it was euthanized.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:

4-WEEK NASOGASTRIC (GAVAGE) TOXICITY/COMBINATION STUDY IN MONKEYS WITH NEORAL® AND A 4-WEEK RECOVERY PERIOD

1.	Registration Number:	22-R-0009
2.	Number of animals used in thi	s study – 44. Number of animals classified as category "E" - 6.
3.	Species (common name)	_Non-human Primates of animals used in this study.
4.	. Explain the procedure producing pain and/or distress.	

These animals were dosed with a pharmaceutical compound.

Six monkeys on this study experienced compound related effects. One was found dead and the clinical signs for the others were not considered so severe that intervention was necessary.

 Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The clinical signs for five monkeys were not considered so severe that intervention was necessary.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:

2-WEEK ORAL (GAVAGE) DOSE RANGE-FINDING STUDY IN MONKEYS

1.	Registration Number:	22-R-0009
2.	Number of animals used in thi	s study – 10. Number of animals classified as category "E" - 2.
3.	Species (common name)	Non-human Primates of animals used in this study.

4. Explain the procedure producing pain and/or distress.

These animals were dosed with a pharmaceutical compound.

Two cynomolgus monkeys experienced the compound related effects of decreased food consumption, decreased locomotor activity, abnormal posture, ataxia and recumbency. They were euthanized on day 5 and 12.

 Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

It was determined that the degree of pain and/or distress recognized in the monkeys justified unscheduled euthanasia.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The general reference is 21 CFR 312.23(a)(8). This reference indicates that there are guidelines available from the FDA that describe ways in which these requirements may be met. More specific guidelines may be found in the following:

USDA Annual Report: October 1, 2002-September 30, 2003

Registration Number 22-R-0030; Merck & Co., Inc

Explanation of items in column E:

One dog experienced unanticipated distress for less than one hour after oral test compound administration for an IACUC-approved research protocol. The dog was examined by a veterinarian and subsequently euthanized. The use of anesthetics, analgesics or tranquilizers would have adversely affected the interpretation of results.

Studies were conducted in rabbits to evaluate the efficacy of novel antibacterial compounds. After being administered a known microbial agent, sixty-six rabbits experienced mild to moderate discomfort for less than 8 hours. Established antibacterial compounds and pain-relieving agents could not be administered because they would prevent assessment of the experimental compounds and defeat the purpose of the research. The minimum numbers of animals were used to provide reliable test results. These procedures were reviewed and approved by the IACUC and monitored by a veterinarian.

USDA Annual Report: October 1, 2002-September 30, 2003

Registration Number 22-R-0030; Merck & Co., Inc

IACUC-approved exceptions to the standards and regulations:

One dog was exempted from the approved dog exercise plan because it was being treated and observed during a post-operative period that lasted for five days.

Nine dogs were exempted from the approved dog exercise plan because they required urine/feces collection for five days after radioactive isotopes were administered.

One dog was exempted from the approved dog exercise plan on two occasions because it required urine/feces collection for five days after radioactive isotopes were administered. The animal was provided with the opportunity to exercise for 24 hours between the first occasion for exemption and the second occasion for exemption.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1.	Registration Number: 22-R-0032
2.	Numberof animals used in this study.
3.	Species (common name) Rabbit of animals used in the study.
	Explain the procedure producing pain and/or distress. A total of 5 rabbits from a group used in studies to evaluate drug candidates for clinical trials were identified as Category E. The rabbits were used to evaluate a HIV inhibitor compound and found dead without prior clinical signs. The studies were designed and conducted in accordance with the FDA guidelines. Veterinary personnel observed all animals daily and provides supportative care when needed.
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)
6.	. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
	AgencyFDACFR58.1

CERTIFICATION BY HEADQUARTERS RESEARCH FACILITY OFFICIAL (Chief Executive Officer or Legally Responsible Institutional Official)

Annual Report of Research Facility October 1, 2002 to September 30, 2003 Huntingdon Life Sciences Registration Number 22-R-0040

A) Explanation of Category E Studies

All studies listed were conducted to conform to federally mandated requirements, promulgated by the US Food and Drug Administration (FDA). These regulations specify preclinical testing requirements necessary for approval of new drugs. Specific regulations include the following:

- 21 CFR 310, New Drugs
- 21 CFR 312.22, Investigational New Drugs/Biologics
- 21 CFR 314, Application for FDA Approval to Market a New Drug or Antibiotic Drug
- M3 Nonclinical Safety Studies for the Conduct of Clinical Trials in Pharmaceuticals –
 Guidance for Industry, US Food and Drug Administration, Center for Drug Evaluation and
 Research (CDER), Center for Biologics Evaluation and Research (CBER), July 1997
- Guidelines for General Pharmacology Studies (Japan Ministry of Health, Labor and Welfare PAB/NDD Notification No. 4, 29 January 1991)
- International Conference on Harmonization (ICH) Guideline Topic S7, Safety Pharmacology

For all studies listed below, the Principal Investigator provided written justification to the Huntingdon Life Sciences Institutional Animal Care and Use Committee that agents may not be used to alleviate pain or distress due to their potential for interference with the compound under investigation. Use of these agents was withheld so as not to invalidate the evaluation of test compounds, which could result in unnecessary duplication of research, and use of animals in number beyond that which is minimally required.

Species	Number of Category E Animals	Description
Rabbits	7	Animals were exposed to test compound via oral administration, for 14 days. Test article effects were evident in 7 animals. Affected animals were humanely euthanized.
Dogs	5	Animals were exposed to test compound via oral administration, for 28 days. Test article effects were evident in 5 animals. Affected animals were humanely euthanized.
Dogs	2	Animals were exposed to test compound via intravenous administration once. Test article effects were evident in 2 animals. Dose was discontiunued in both affected animals.
Dogs	2	Animals were exposed to test compound via intravenous administration once. Test article effects were evident in 2 animals. Both affected animals animals were humanely euthanized.
Primate	8	Animals were exposed to test compound via intravenous administration for 8 days. Test article effects of brief duration resolved spontaneously in 8 affected animals.
Primate	1	Animals were exposed to test compound via intravenous administration, once per week for 4 weeks. Test article effects of brief duration resolved spontaneously in 1 affected animal.

Annual Report of Research Facility October 1, 2002 to September 30, 2003 Huntingdon Life Sciences Registration Number 22-R-0040

Species	Number of Category E Animals	Description
Primate	10	Animals were exposed to test compound via oral administration for 28 days. Test article effects were evident in 10 animals. Four of the affected animals were humanely euthanized.
Primate	7	Animals were exposed to test compound via intravenous administration, four times over a 2-week period. Test article effects of brief duration resolved spontaneously in 7 affected animals.
Primate	2	Animals were exposed to test compound via oral administration for 28 days. Test article effects were evident in 2 animals. Both affected animals were humanely euthanized.

B) Summary of IACUC-approved exceptions to the Standards and Regulations:

- 13 dogs were exempted from the exercise requirement for 18 days during surgical recovery and data collection via subcutaneous telemetry implant.
- 14 dogs were exempted from the exercise requirement for 10 days during surgical recovery and 12 of these dogs were also exempted from the exercise requirement for an additional 9 days during data collection via subcutaneous telemetry implant.
- 6 dogs were exempted from the exercise requirement for 5 days during surgical recovery.
- 14 dogs were exempted from the exercise requirement for 10 days due to surgical recovery and 12 of these dogs were also exempted from the exercise requirement for an additional 29 days during data collection via subcutaneous telemetry implant.
- 59 dogs were exempted from the exercise requirement for 21 days during surgical recovery.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anestetic, analgesic, and tranquilizing drugs, prior to, during, and following actual rese teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and ap institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary inc brief explanation of the exceptions, as well as the species and number of animals affected.

The attending veterinarian for this research facility has appropriate aut	hority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects	s of animal care and use.

Section 3.128 Space Requirements. Enclosures shall be constructed and maintained so as to provide sufficient space to allow each animal to make normal postural and social adjustments with adequate freedom of movement.

Exception: An exception to the standard found in Section 3.128 was requested by the principal investigator based upon scientific necessity and was granted by the IACUC. The explanation is summarized as follows: During observation periods lasting 8 to 12 hours and during a drug infusion period of 48 hours, each pig needs to be confined in a metabolic cage that restricts its horizontal movements. The metabolic cage measures 1.5' wide, 3' long and is 4' high. The pig will be able to stand or recline but will have restricted movement so as not to pull out the pulmonary artery and aortic catheter which would result in exsanguination of the drug infusion catheter. The maximum period of time any individual pig would be confined to the metabolic cage would be 56 hours. The pigs will be transferred to a holding cage with approximately 18 square feet of floor space when they are not being experimentally observed and not being infused.

1/12/04 Date This report is required by law (7 USC 2143). Failure to report according to the regulations can NOV 2 4 2003 result in an order to cease and desist and to be subject to scartful. result in an order to cease and desist and to be subject to penalties as provided for in Section 21!

(AUG 91)

Facility Registration Number: 22-R-0069

The animals listed in Column E of APHIS Form 7023 included 162 guinea pigs and 152 rabbits. The rabbits were used on irritation studies. These studies are used to determine the dermal or ocular irritation potential of the articles tested. The guinea pigs were used on sensitization studies. These studies were used to determine the sensitization potential of the products tested.

In all cases the "procedures producing pain or distress" were either the injection of an adjuvant or the application of an irritating substance to the animal(s) in question. The sponsors of these studies had indicated that the use of anesthetics or analgesics might have interfered with the interpretation of the test results.

As a contract facility, we are not always aware of the nature of the articles being tested and rely upon our sponsors to responsibly determine the appropriateness of the use of anesthetics and/or analgesics.

At the USDA's suggestion, we have included in Column E animals exhibiting maximum irritation scores in the above mentioned study types but not necessarily having exhibited behavioral responses normally associated with pain or distress. In cases where an animal had exhibited a behavioral response normally associated with pain or distress, the response was no more than momentary but the procedure was recorded as "painful" nonetheless.

EXPLANATION OF COLUMN "E" ENTRIES

10/01/02 through 9/30/03

102 Rabbits – Eye Irritation Test (OPPTS 870.2400): Thirteen (13) of these animals vocalized following instillation of the test compound but immediately became calm after they were returned to their cage. Therefore, anesthetic was not considered. Although the remaining animals (89) did not exhibit overt signs of pain or distress, they exhibited ocular irritation scores above an arbitrary threshold and were considered to be in distress as a result of their exposure to the test compound. Although in the eye irritation test ocular anesthetic may be used prior to instillation, repeated and/or prolonged anesthetic use could retard healing and possibly lead to collateral irritation and/or subsequent corneal infection. Therefore, ocular anesthetic was not used on the animals evidencing ocular irritation scores above this established threshold limit.

7 Rabbits – Dermal Irritation Test (OPPTS 870.2500): All animals exhibited eschar and/or corrosion at the dose site, which could indicate possible necrosis of the skin. In all cases, the area of exposure and subsequent skin damage was ≤ 1 in². Continuous or prolonged use of topical or systemic anesthetic agents during dermal irritation tests was not considered appropriate since it could lead to study complications including increased irritation and delayed healing. The use of analgesic agents would be inappropriate in these studies due to resultant anti-inflammatory effects that could mask the indicators of irritation. If used, they might significantly alter the effects of the test compound and compromise study results.

700 Guinea Pigs – Dermal Sensitization Test (OPPTS 870.2600): Similar to the dermal irritation test noted above, these animals exhibited eschar and/or corrosion at the dose site, which could indicate possible necrosis of the skin. In all cases, the area of exposure and subsequent skin damage was ≤ 1 in². Continuous or prolonged use of topical or systemic anesthetic agents during dermal sensitization tests was not considered appropriate since it could lead to study complications including increased irritation and delayed healing. The use of analgesic agents would be inappropriate in these studies due to resultant anti-inflammatory effects that could mask the indicators of sensitization. If used, they might significantly alter the effects of the test compound and compromise study results.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1	Registration Number: 22-R-() 6
2.	Number 1 (not on study) of animals used in this study.
3.	Species (common name) beagle bog of animals used in the study.
4.	Explain the procedure producing pain and/or distress. Dog accidentally got neck/head stuck in chain provided to aid in cleaning process. Dog struggled causing stangulation + death. Dog was not on study
5.	Provide scientific justification why pain and/or distress could not be relieved. State methods or means used determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, Item 6 below) None. Lot on sty. Accident al death. All chains immediately removed + USDA tuet notified
6.	What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
	AgencyCFR
